

HydroPod

Stormwater Inlet Treatment

Product Info

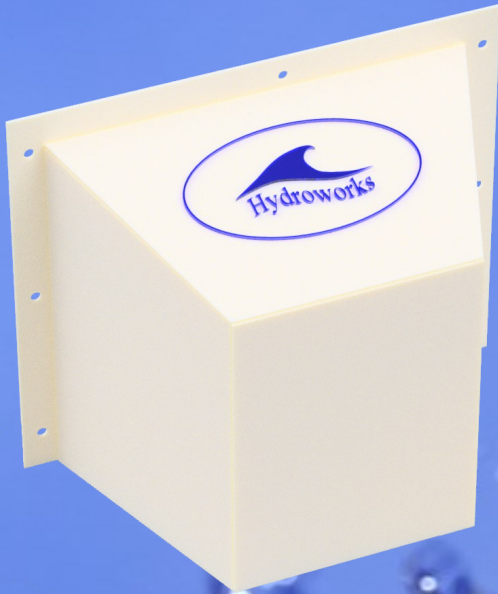

HydroPod is a modular stormwater treatment device for use at inlets.

Applications

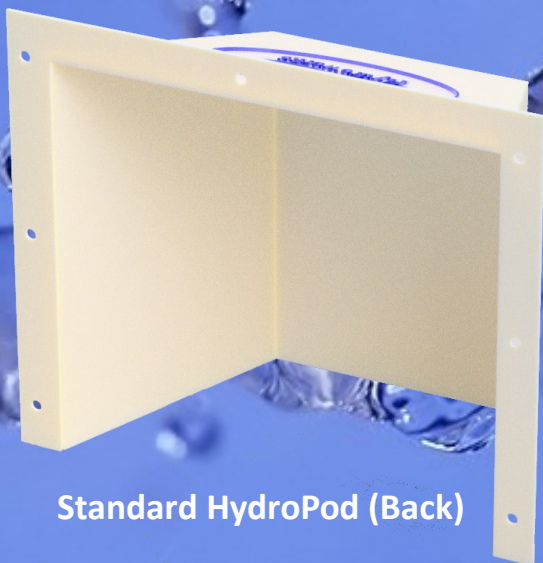

HydroPod can be used as a stand-alone treatment solution; as part of a treatment train; or as a pretreatment device for infiltration, underground storage, and bio-retention.

Features

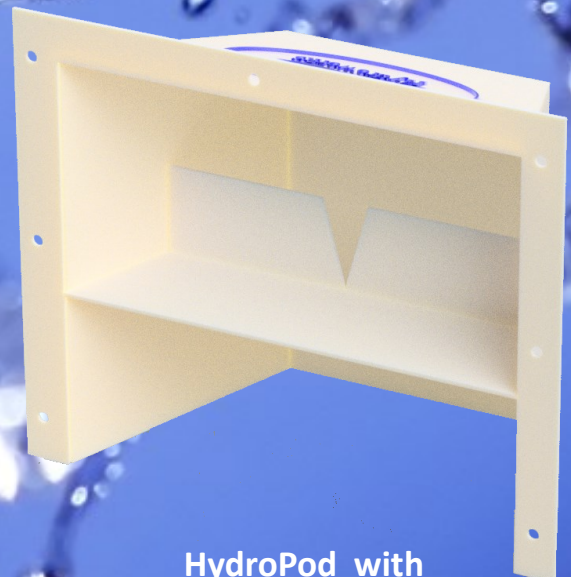

- Lower Cost than a separator
- Captures oil spills, TSS and trash
- Can customize length for greater oil / floatables capture
- Can add a v-notch weir to enhance TSS removal based on HydroDome technology
- Can add a scour plate for enhanced TSS and trash scour protection

Standard HydroPod (Front)
